Videonetics helps Indonesia Government Institution to improve people identification and authentication.

SYSTEM INTEGRATOR

Lamjaya Inovasi Komputindo

LOCATION

Jakarta, Indonesia

INDUSTRY SEGMENT

Government Institution

SOLUTION

MeraFace™, powered by
DeeperLook™ - AI & Deep
Learning Framework

MISSION:

With a mission to recognize faces of the people entering/exiting premise of the Government Institution at Indonesia, and analyse their attributes in real-time, the authority needed an extremely robust and 'highly secured' facial recognition system. Due to heavy footfall at the premise, it was difficult for staff to manually record information of visiting people and verify their identity on daily basis. Sometimes, they faced challenge in verifying them due to changes in appearance or features.

THE SOLUTION:

Videonetics MeraFace™ - Facial Recognition Software was selected after a thorough technical evaluation by the partner as well as government decision makers, Videonetics MeraFace™ was selected for its highest accuracy in recognizing and detecting faces, in varied lighting condition, providing additional attributes of gender, age and emotions and comprehensive statistical reporting. Operating 24x7x365 on one of the busiest premises having footfall of VIPs, citizens, media, and government officials, Videonetics MeraFace™ was deployed at strategic locations with high human traffic flows including entry and exit and lift lobby area, of the institution.

1. Video streams from IP cameras are processed at MeraFace™ to **detect faces in real-time** and operators **find probable match with the registered faces**. In case, any face which is not registered but has been captured and stored in the system, can also be found anytime.
2. Operators have been **keeping records of registered faces and attributes of the person's face** for future search and investigation.
3. Powered by AI & Deep Learning framework, MeraFace™ **analyses and delivers more information such as gender, age, emotion**, eventually helpful for officials to make accurate visitors' analysis.
4. Now, operators can **identify and classify VIP, suspected, blacklisted people in real-time** with easy clicks and send the instant notification to the staff, for any swift action.
5. At the time of any suspicious activity, operators can quickly **investigate person's face in the given videos or collection of face images**. Moreover, this feature has been phenomenally successful as an investigation tool, for conducting post incident analysis.

THE IMPACT:

Videonetics MeraFace™ has been proven to be a reliable and scalable system for the government authority by delivering fast and highly accurate results.

Today, the security staff can recognize and detect faces in real-time. Furthermore, MeraFace™ has helped in appointing a smaller number of security guards around the entrance or exit of the premise, thanks to automated facial recognition system of identifying and validating information. Risk of human errors in face matching has also been eliminated.

**Making the world
a safer, smarter,
happier place.**

Videonetics's Unified Video Computing Platform™ helps you make sense of surveillance, by providing you with an end-to-end solution for a wide range of applications. The platform is powered by our Artificial Intelligence and Deep Learning engine, which is trained on humongous data sets, making our solutions incredibly robust and smart. All our products and solutions are integrated yet modular, ONVIF compliant, OS and hardware agnostic, scalable and interoperable.

Videonetics has been ranked among the top video management software providers, and among the fastest growing technology companies, in Asia Pacific. And we remain driven by innovation, and committed to making the world a safer, smarter, happier place.

"Videonetics has not only delivered a perfect facial recognition solution, but also delivered on its reputation of providing outstanding training and support, to us and customer. Our customer has invested in the future-proof technology that has the ability to grow with their needs", expressed Alfred Bisuk, Technical Manager, Lamjaya Inovasi Komputindo.
